

ROHIT BAGADE

Backend Engineer — LLM Applications · Python · Java · Distributed Systems

Mumbai, India (open to Bangalore / Remote) | 967 316 6256 | rohitbagde535@gmail.com

LeetCode · Portfolio · GitHub · LinkedIn

PROFILE SUMMARY

Backend engineer with 3.5+ years shipping enterprise-scale, high-reliability systems, now building LLM applications end-to-end. Designed a from-scratch multi-provider LLM platform — 4-tier failover, tool/function-calling, prompt & context engineering, human-in-the-loop control — on a hand-written Python core with 144 automated tests. Backs it with production Java/Spring Boot engineering: microservices, relational databases, and failure-mode design (circuit breaking, idempotency, rate-limiting). 350+ DSA problems, Level 6 Coding Ninjas.

TECHNICAL SKILLS

AI Engineering: LLM Application Development, Multi-Provider LLM Clients, Function/Tool-Calling, Prompt & Context Engineering, Human-in-the-Loop Systems, Workflow Automation, Streaming Responses

Languages: Python, Java, SQL, PL/SQL, JavaScript/TypeScript, Shell

Backend & Distributed Systems: Flask, Spring Boot, REST APIs, Microservices, Failover & Circuit Breaking, Idempotency, Rate-Limiting, Caching, Async/Background Processing

Databases: PostgreSQL, Oracle, MySQL, MongoDB, Redis

Cloud & DevOps: Docker, GitHub Actions (CI/CD), Fly.io, Git, Linux; AWS (familiar — workshops + personal deployments)

PROJECTS

AI Assistant Platform — Multi-Provider LLM Application (Python · Flask · Redis · CI/CD)

- Built a **multi-provider LLM client with 4-tier automatic failover, circuit breaking, and rate-limit-aware model downgrade**, translating tool-schemas across vendor APIs (Anthropic/OpenAI) behind one interface.
- Implemented **OpenAI-format function/tool-calling** with a bounded execution loop, plus a fail-open **prompt-optimization pass** and context-window management for flat per-request token cost.
- Shipped an **autonomous scheduled pipeline** with reliability safeguards: idempotent send-log, circuit breakers, fail-closed validation.
- Hand-written Python core (no LLM framework), **144 automated tests**, deployed on Fly.io via GitHub Actions.

Calorie Counter — React · Node · OpenAI API

- NL-to-structured parser turning free-text food input into calorie/macro breakdowns via dynamic prompt construction.

PROFESSIONAL EXPERIENCE

Accelya Solutions — Software Development Engineer (SDE-1 → SDE-2), Hybrid, Mumbai | Sep 2022 – Present

- Owned ~80% of end-to-end development for two core modules of an enterprise financial-transaction platform (design → delivery).
- Led modernization: **Java 8 → Java 17**, **JBoss → Tomcat**; built Spring Boot services over Oracle/PostgreSQL/PL-SQL.
- Designed a **PII-masking microservice** for privacy compliance; resolved complex production defects via root-cause analysis.
- Drove code quality (SonarQube, reviews), HLD/LLD, and Agile delivery.

EDUCATION

B.E. Electronics — Ramrao Adik Institute of Technology (D. Y. Patil University), Navi Mumbai | 2022 | GPA 7.66/10

ACHIEVEMENTS

- 350+ DSA problems**; Level 6 Coding Ninjas. Promoted **SDE-1 → SDE-2** for early, low-rework delivery.
